CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The use of anti-C5 antibodies, e.g., monoclonal antibodies, to treat glomerulonephritis (GN) is disclosed. The administration of such antibodies at low dosage levels has been found to significantly reduce glomerular inflammation/enlargement and other pathologic conditions associated with GN.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

C5 convertuse releases C5a anaphylatoxin from the amino end of the alpha chain, generating C5b (beta and alpha" chains).
Activation of C5 initiates the spontaneous assembly of the late complement components, C5-C9, into the membrane attack complex. C5b has a transient binding site for C6. The C5b-C6 complex is the foundation upon which the membrane attack complex is

TO Complement C5 contains two disulfide-linked chains, formed by removal of four basic residues. C5 convertase releases C5a anaphylatoxin from the amino end of the alpha chain, generating C5b (beta and alpha' chains).

TACIVATION Of C5 initiates the spontaneous assembly of the late complement components, C5-C9, into the membrane attack complex. C5b has a transient binding site for C6. The C5b-C6 complex is the foundation upon which the membrane attack complex is
                                                                                                                                                                                                                                                                                                                                                                                                               ##nolecule_type mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     #domain tonB-dependent receptor amino-terminal homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pettersson, A.M.; Klarenbeek, X.Y.Z.; van Deurzen, X.Y.Z.;
Poolman, X.Y.Z.; Tommassen, X.Y.Z.
submitted to the EMBL Data Library, June 1994
Molécular charactarization of the structural gene for the
lacto-ferrin receptor of the meningococcal strain H44/76.
849087
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  849087 #type complete

Statistics: Mean 26.489; Variance 29.186; scale 0.908

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 25.849; Variance 31.531; scale 0.820

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Wed Sep 6 08:17:17 2000; MasPar time 2.98 Seconds 166.869 Million cell updates/sec

Tabular output not generated.

Description: Perfect Scor >US-08-487-283A-1 (1-21) from US08487283A.pep

Score:

Sequence: 1 VIDHQGTKSSKCVRQKVEGSS 21

Scoring table: PAM 150 Gap 15

188963 seqs, 23686106 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-geneseq36 1:geneseqp

Statistics: Mean 18.949; Variance 55.942; scale 0.339

d. No. is the number of results predicted by chance to have a re greater than or equal to the score of the result being printed, is derived by analysis of the total score distribution.

The cDNA sequence of the complement C5 gene transcript predicts a secreted pro-C5 precursor of 1676 amino acids (R77604). C5 is a beta-globulin heterodimer thought to play a role in the pathogenesis of glomerulonephritis (GN). Cleavage of the C5 alpha-chain by a convertase enzyme generates anaphylatoxic C5a. Monoclonal and humanised recombinant antibodies that recognise the alpha-chain KSSKC epitope (R77605) block C5a generation, thereby reducing glomerular inflammation and kidney dysfunction associated with GN. Sequence 21 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pro-C5 polypeptide KSSKC epitope.

The cDNA sequence of the complement C5 gene transcript predicts a secreted pro-C5 precursor of 1676 amino acids (R77604). C5 is a beta-globulin heterodimer thought to play a role in the pathogenesis of glomerulonephritis (GN). Cleavage of the C5 alpha-chain by a convertase enzyme generates anaphylatoxic C5a. Monoclonal and humanised recombinant antibodies that recognise the alpha-chain KSSKC epitope (R77605) block C5a generation, thereby reducing glomerular inflammation and kidney dysfunction associated with GN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

CT he invention relates to a method for diagnosing a disorder characterised

CT he invention relates to a method for diagnosing a precursor coded for by

a nucleic acid molecule (NAM). The method comprises: (a) contacting a

CT blological sample isolated from a subject with an agent that specifically

CT binds to the NAM, an expression product or a fragment of an expression

CT product complexed with an HIAA molecule; and (b) determining the

CT product complexed with an HIAA molecule; and (b) determining the

CT chermination of the disorder. The products and methods can be used in

CT chermination of the disorder. The products and methods can be used in

CT characterised by the expression of various cancer associated antigens.

CT characterised by the expression of various cancer associated antigens.

CT characterised by the expression precursors expressed in human breast

CT cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and

     Isolated Porphyromonas gingivalis genes - encoding haemagglutinin and/or protease poly:peptide(s))
Claim 1; Column 69-84; 101pp; English.
This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the prtp haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and periodontal disease.
                                                                                                                                                                                                                                                                                Haemaggiutinin protein pitP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           isolated CDNA clone (see V71740). OSMAD7 is a novel MADS-box gene involved in the control of floral development and apical dominance. OSMADS6 (see W84048) and OSMADS6 (see W84050) proteins are also disclosed. Expression of OSMADS6 (see W84050) proteins are also transgenic plant causes the plant to exhibit at least one phenotype selected from: (i) diminished apical dominance, (ii) early flowering, (iii) altered daylength requirement for flowering, (iv) greater synchronisation of flowering, and (v) relaxed vernalisation requirement, compared to a non-transgenic control plant. Claimed methods of producing such a transgenic plant utilise: (i) OSMADS6, OSMADS7 or OSMADS8 nucleic acids (see V71739-41).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New plant MADS-box genes - useful for, development and apical dominance Example 1; Fig 2; 53pp; English. SACTOR SEPTEMENT FOR THE PROPERTY OF THE PROPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ဂ္ဂဇ္လ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                CA PrtR-PrtK cell surface protein of Porphyromonas ginivalis (PG)
Comprises a 300 kDa complex composed a 48 kDa lysine-specific
Child protease and 39, 15 and 44 kDa adhesins encoded by the prtK
C gene (T78851), and a 45 kDa arginine-specific thiol protease and
C 44, 15, 17 and 27 kDa adhesins (see W24786) encoded by the prtR
C gene (T78850). A claimed antigenic complex comprises at least one
c multimeric protein complex of PrtR and PrtK each containing at
C least one adhesin domain, the complex having a mol.wt. of over 200
C kDa, and preferably comprises all 9 proteins of the PrtR-PrtK
C complex (see also W24780 85). It can be used in a claimed
C composition to elicit an immune response directed against PG, and
C compestition to elicit an immune response directed against pG, and
C in a claimed method of reducing the prospect of FG infection and/or
C severity of disease. Antibodies directed against the complex are
C claimed for use in treating PG infection. Unlike whole PG cells or
C capsule, the PrtR-PrtK complex or component parts are safe and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

Non-A, non-B, non-C, non-D, non-E Hepatitis virus reagents - useful for diagnosis and therapy of hepatitis GB virus

Example 9; Pages 401-414; 661pp; English.

Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV

confected tamarin plasma, using standard procedures, was used to prepare a lambda phage HGBV conversed rescued from the lambda phage, searched against a sequence database and from the lambda phage, searched against a sequence database and assemble the sequences. The clones were then used to assemble the sequences 70129/30 (GB contig A and B) which encode the proteins R94345-47 (the 3 possible coding strand reading frames) and R82072, respectively. Reagents which comprise the HGBV or its procein prods. can be used for the diagnosis, therapy sequence 3163 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Inhibition of GP88 expression or action in the tumorigenic cells results in an inhibition of the tumorigenic properties of the overproducing cells. Murine GP88 EDNA (see V8284) was obtained from the highly tumorigenic PC cell line. Antagonists to GP88 are used to treat diseases associated with increased expression of GP88 are used to a raise specific antibodies (used as antagonists, as diagnostic reagents and for delivering toxins or other compounds to GP88-cexpressing cells) and to screen for antibodies. Methods are provided for diagnosing disease, or determining susceptibility to disease, resulting from altered GP88 activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match 37.6%;

The sequence given is one allele of type A human platelet-derived
The sequence given is one allele of type A human platelet-derived
The sequence given (PDGF R). This receptor is typically
found on cells of mesenchymal origin. It acts while in the form of
two transmembrane glycoproteins, each of which is about 180 kD.

This receptor has three major regions. The first is a transmembrane
region, which spans the membrane once, separating the regions of the
receptor exterior to the cell from those interior to the cell. The
second region is an extracellular region which contains the domains
which bind the PDGF. The third region is an intracellular region
which possess a tyrosine kinase activity. This tyrosine kinase
domain is notable in having an insert of approx. 100 amino acids,
as compared with most other receptor tyrosine kinase domains which
are contiguous or have shorter insert sequences. Fragments of this
sequence between 8 and 400 amino acids comprising one or more PDGF
Ligand a PDGF. Ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA encoding platelet-derived growth factor - used to transform cells for culturing to detect PDG agonists and antagonists claim 1; Fig 1; 30pp; English.

Gene product may be expressed from a transformed cell. It has utility in dection of PDGF agonist and antagonist analogues, binding AA, AB and BB isoforms. PDGF agonists may be used to enhance wound healing, and antagonists may be used to block the effects of PDGF eg. in treatment of atherosclerosis or fibrotic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
